

Brokerage Cycle

Illustrated end-to-end walkthrough

Module: real_estate_brokerage
Version 0.1 · 2026-05-13

The Big Picture

The brokerage cycle takes a buyer from interest to ownership through 6 stages. Each stage has its own model in the system, and movement between stages is recorded as state transitions.

Two parallel tracks meeting in the middle

The Running Example

SCENARIO

Throughout this guide we follow **Khalid Al-Mansour** (buyer) interested in apartments in Riyadh, looking at **RH Tower A Unit 103**, listed by agent **Sara Al-Otaibi**.

Listing RH Tower A, Unit 103 3 bedrooms, 150 sqm Riyadh Heights project List price: 1,800,000 SAR	Lead Khalid Al-Mansour Source: Property Finder portal Budget: 1.5M–2.0M SAR Preferences: 3BR, Riyadh, apartment
---	--

Stage 1 — The Listing

Everything starts with a property going on the market. The agent creates a realestate.listing record tied to an existing property in the catalog.

Listing State Machine

What goes on a listing

Field	Why it matters
property_id	The actual unit being sold (must exist in catalog).
list_price	Asking price. Drives matching (a 2M lead won't match a 5M listing).
lister_agent_id	Owner of the listing. Earns the lister-side commission on close.
co_agent_ids	Other agents on the listing.
expiry_date	Listing automatically expires past this date (cron).
marketing_channel_ids	Tags: Bayut, Property Finder, Dubizzle. Tracks where leads come from.
days_on_market	Auto-computed. Color-codes the kanban card.
final_sale_price + list_to_sale_ratio	Populated on close. KPIs for agent performance.

Step-by-step

- 1

Create the listing. **Brokerage → Listings → New** . Pick the property (RH Tower A Unit 103), set list price 1,800,000 SAR, assign agent Sara Al-Otaibi, expiry 90 days out, tag marketing channels.
- 2

Click Activate. State transitions **draft** → **active** . `list_date` stamps to today. The kanban now shows the listing under "Active" with viewing/offer counters at 0.

Stage 2 — The Lead

A potential buyer reaches out — via website form, phone call, walk-in, referral, or portal. Captured as realestate.lead.

Lead State Machine

Lead Kanban Pipeline (live view)

NEW	QUALIFIED	MATCHED	VIEWING	OFFER	CONVERTED
K Khalid Al-Mansour Portal · 2.0M budget R Reem Al-Harbi Walk-in · 1.2M	A Ahmed Al-Otaibi Referral · 3.5M	F Fatima Al-Saud Portal · 1.8M	N Nasser Al-Mutairi Site visit booked	O Omar Al-Ghamdi Bid: 2.4M	L Layla Al-Saud Closed last week

What goes on a lead

Section	Fields
Contact	partner_id, phone, email, source (walk_in / website / referral / portal / call), agent_id, priority
Budget	budget_min, budget_max, currency
Size	area_min, area_max, bedroom_count_min
Location	preferred_country_id, preferred_state_id, preferred_city, preferred_district
Type	property_type_ids (multiple)
Loss	loss_reason_id (only on state=lost)

- 3

Capture Khalid. Brokerage → Leads → New. Source = Portal, budget 1.5M–2.0M, preferred city = Riyadh, property type = Apartment, bedrooms_min = 3.
- 4

Click Qualify after verifying contact info. State: new → qualified.

Stage 3 — Auto-Matching

This is where supply meets demand. From the lead form, click **Find Matches**. The system queries active listings using the lead's preferences.

Matching algorithm

Lead preference	Listing filter applied
budget_max	list_price ≤ budget_max
budget_min	list_price ≥ budget_min
property_type_ids	listing.property_type_id IN preferences
preferred_city	listing.property_id.city ILIKE preferred_city
state filter	only listings with state = active

Visualization

5

Click Find Matches. The system populates `matched_listing_ids` with all matching listings. Lead state moves to matched (only if matches found).

Result for Khalid: 2 matches found — Unit 103 (1.8M, 150 sqm, 3BR) and Unit 211 (1.95M, 165 sqm, 3BR).

Stage 4 — The Viewing

From the lead, the agent schedules a property showing using realestate.viewing.

6

From the lead, click Schedule Viewing. A new viewing opens pre-filled with listing, lead, partner, agent. Set `scheduled_at` = Saturday 10:00 AM. Lead state moves to `viewing_scheduled`.

Calendar visualization

Time	Mon	Tue	Wed	Thu	Fri	Sat	Sun
09:00							
10:00						Khalid x Unit 103	
11:00							
12:00			Other booking				

After the viewing

7

Walk the property. Open the viewing on mobile, fill the `feedback` field with notes ("Liked the layout, concerned about street noise"), set `feedback_rating` = "Very Interested", `next_action` = "Expect Offer".

8

Click Mark Completed. State `scheduled` → `completed`.

9

Click Create Offer. An offer form opens pre-filled with listing + lead + buyer + agent.

Stage 5 — The Offer

Buyers submit offers via realestate.offer. A single listing can have multiple offers; the system handles competition.

Offer State Machine

Multiple offers, one winner

Listing 103 received 3 offers. The agent compares side by side:

Offer	Buyer	Amount	Deposit	Conditions	Valid Until
OFR-00001	Mariam Al-Saud	1,650,000	50,000	Subject to financing	2026-05-25
OFR-00002	Khalid Al-Mansour	1,780,000	80,000	None	2026-05-20
OFR-00003	Reem Al-Harbi	1,720,000	40,000	Subject to inspection	2026-05-22

Khalid's offer is highest, has the biggest deposit, no conditions. Lister picks it.

10

Click Accept on OFR-00002. Cascading effects all happen in one click:

- OFR-00002 state → **accepted**
- OFR-00001 + OFR-00003 auto-rejected with reason *"other_offer_accepted"*
- Listing state → **under_offer**
- Khalid's lead state → **offer**

Cascading state change (visualized)

Stage 6 — The Transaction

An accepted offer can be promoted to a `realestate.transaction` — the legal/accounting artifact of the sale.

Transaction Type: In-House vs Brokerage

In-House

You sell your own property.

- No third-party commission required
- Commission lines optional
- Used by developers selling own inventory

Brokerage

You sell someone else's property.

- Commission lines required before close
- Earn commission from seller (and sometimes buyer)
- Standard for brokerages and agencies

Transaction State Machine

Transaction Milestones (visualized)

11 From the accepted offer, click **Create Transaction**. A draft TXN opens pre-filled with buyer = Khalid, property = Unit 103, sale_price = 1,780,000.

12 Set `transaction_type = brokerage`, set `deposit_amount = 80,000`.

13 Khalid pays the deposit. Click Record Deposit. State: `draft` → `deposit_received`. `deposit_paid_date` stamps.

14 Both parties sign the sale agreement. Click Sign Contract. State → `contract_signed`. `sale_agreement_date` stamps.

15 Click **Add Default Commissions**. Auto-creates commission lines using each agent's `commission_share_default`. (See next page.)

16 Deed transferred, click **Close**. Final state changes:

- TXN state → `closed`
- `closing_date` stamps
- Listing state → `sold`; `final_sale_price` = 1,780,000
- Listing's `list_to_sale_ratio` auto-computes = 1,780,000 / 1,800,000 = 98.9%
- Property's `owner_id` changes to Khalid Al-Mansour

Stage 7 — Commission Payout

The brokerage earns commission. The realestate.commission model holds one row per recipient.

Commission Split for Khalid's Sale

#	Recipient	Role	Method	%	Amount	Paid?
1	Sara Al-Otaibi	lister	percentage	1.25%	22,250 SAR	☐
2	Yousef Al-Rashid	selling	percentage	1.25%	22,250 SAR	☐
3	Atmta Brokerage	brokerage	percentage	0.50%	8,900 SAR	☐
TOTAL					53,400 SAR (3.0%)	

Visualization of the commission split

17 Pay each agent. Create a vendor bill (account.move with move_type=in_invoice) on the agent's res.partner, then on the commission line tick `paid` and link `payment_move_id`.

Other commission roles available

Role	Used when
lister	Agent who brought the listing to the brokerage
selling	Agent who brought the buyer
referrer	Third party who referred either side (e.g., partner agency)
brokerage	The brokerage company's cut
other	Any other party (legal fees, finder, etc.)

Complete Timeline — Khalid's Purchase

Day	Stage	Action	State after
Day 0	Listing	Sara lists RH Unit 103 at 1.8M, marketing channels Bayut + Property Finder	listing: active
Day 3	Lead	Khalid registers via Property Finder. Yousef captures the lead.	lead: new
Day 3	Lead	Yousef calls, verifies info, clicks Qualify	lead: qualified
Day 4	Match	Yousef clicks Find Matches → 2 units found	lead: matched
Day 7	Viewing	Schedule viewing on Saturday at Unit 103	viewing: scheduled
Day 12	Viewing	Saturday 10:00 AM — Khalid likes the unit. Mark Completed, rating=very_interested	viewing: completed
Day 12	Offer	Click Create Offer from viewing. Khalid bids 1,780,000 with 80K deposit, no conditions	offer OFR-00002: submitted
Day 14	Offer	Two other buyers submit competing offers	3 offers submitted
Day 15	Offer	Sara accepts OFR-00002 → others auto-rejected, listing under_offer	OFR-00002: accepted
Day 15	Transaction	Click Create Transaction → draft TXN-00001 opens	txn: draft
Day 16	Transaction	Khalid wires 80K deposit → Record Deposit	txn: deposit_received
Day 21	Transaction	Sale agreement signed at notary → Sign Contract	txn: contract_signed
Day 21	Commission	Click Add Default Commissions → 3 lines created	3 commission lines unpaid
Day 35	Transaction	Deed registered with land registry. Click Close.	txn: closed listing: sold
Day 36	Property	Property owner_id = Khalid Al-Mansour (auto)	—
Day 40	Commission	Vendor bills created for both agents → mark commission lines as Paid	3 lines paid

The Numbers at the End

Brokerage Revenue Lister commission: 22,250 Selling commission: 22,250 Brokerage cut: 8,900 Total: 53,400 SAR	Listing KPIs Days on market: 15 List price: 1,800,000 Final sale: 1,780,000 List-to-sale ratio: 98.9%
---	---

FINAL STATE

Khalid is the registered owner of Unit 103. The listing is sold. Sara has 22,250 SAR commission paid. The brokerage has 53,400 SAR total revenue. The next time Khalid comes back — e.g., to sell this unit or buy another — his prior lead and transaction history is already in the CRM.
